Project title: Exploring the link between circulating factors released in fluids of patients with rheumatoid arthritis and the increased susceptibility to psychiatric diseases

Graduated in Medical Biotechnology and Molecular Medicine in 2021 at the University of Milano. She is now working in the laboratory “Neuropharmacology and Synapse Biology” of prof. Antonucci. Her project is focused on studying the effects on neurons of circulating factors released in fluids of patients with rheumatoid arthritis and their possible involvement in increasing the susceptibility to psychiatric diseases.
