I graduated in Medical Biotechnology and Molecular Medicine (MBMM) at the University of Milan in 2022. I'm currently a PhD student in Experimental Medicine and I'm working in the Molecular Oncology and Immunology Lab of Prof. Massimiliano Pagani at the FIRC Institute of Molecular Oncology (IFOM) in Milan. In particular, I'm investigating the impact of the tumor microenvironment on tumor infiltrating CD4⁺ T regulatory cells, in order to specifically target them at cancer site.
