February 16<sup>th</sup>, 2023 - 4.00 pm  
Aula C, LITA Segrate

## **ANALYSIS OF ctDNA TO INTERCEPT THE WHISPERING VOICE OF HIGH GRADE SEROUS OVARIAN CANCER**

As for other neoplasms, liquid biopsy can be a useful tool to improve diagnosis and to monitor the response to therapy of high-grade serous epithelial ovarian cancer, which is the most common and lethal gynecological malignancy.

In this talk, an overview of the available knowledge on the current status and future opportunities for the analysis of tumor-derived components circulating in the blood will be presented, with a special focus on its implementation for the clinical management of high-grade serous epithelial ovarian cancer patients.

**The streamed seminar will be available:
